

JSONPlaceholder

Fake Online REST API for Testing and Prototyping

powered by [JSON Server](#) and [lowdb](#)

 Recommend 690 [Follow @typicode](#)

Intro

JSONPlaceholder is a free online REST service that you can use whenever you need some fake data.

It's great for tutorials, faking a server, sharing code examples, ...

Example

Run this code in a console or from anywhere (CORS and JSONP supported).

```
var root = 'https://jsonplaceholder.typicode.com';

$.ajax({
  url: root + '/posts/1',
  method: 'GET'
}).then(function(data) {
  console.log(data);
});
```

Run

"Try me!"

Resources

Inspired by common use cases.

/posts	100 items
------------------------	-----------

/comments	500 items
---------------------------	-----------

/albums	100 items
/photos	5000 items
/todos	200 items
/users	10 items

Routes

All HTTP verbs are supported.

View usage [examples](#).

GET	/posts
GET	/posts/1
GET	/posts/1/comments
GET	/comments?postId=1
GET	/posts?userId=1
POST	/posts
PUT	/posts/1
PATCH	/posts/1
DELETE	/posts/1

Use your OWN data

[JSON Server](#) powers this website. You can use it to create the same fake API in less than **30 seconds** with your own data.

```
npm install -g json-server
```

Or you can try [My JSON Server](#) free service.
